

Oriol Tomàs Fortuny

Frontend Tech Lead at PDPAOLA. I came in through the backend and ended up leading the front of a jewelry ecommerce.

PHP and Symfony taught me to build things that hold up. These days it's Nuxt and TypeScript on the front, Laravel and GraphQL on the back, and MongoDB and RabbitMQ when the volume calls for it. The rest of the job never lands in a repository: deciding the architecture, reviewing code, and growing the team's autonomy.

WORK

2021 –

PDPAOLA Jewelry

Barcelona · Hybrid · 5 yrs 2 mos

Frontend Tech Lead Dec 2025 – Present **CURRENT**

Ecommerce Tech Lead Sept 2023 – Dec 2025

Fullstack Web Developer Aug 2021 – Sept 2023

Technical leadership of the ecommerce team and, since the end of 2025, of the frontend chapter: architecture, code review, priorities and mentoring. A Nuxt and TypeScript storefront over a Laravel and GraphQL backend, with RabbitMQ and MongoDB underneath. Before that, fullstack work on the shop itself.

PROJECTS

Things I build outside work, mostly to answer a question I could not find a good answer to.

2026

Aprèn en Calma

Quiet games for children aged two to seven, learning letters, numbers, shapes and colours. No sounds, no rewards, no rush — deliberately the opposite of what most children's apps do. A single HTML file with no dependencies, that installs like an app and keeps working with no connection.

PWA

Vanilla JS

STACK

FRONTEND

Nuxt · Vue.js · TypeScript · JavaScript · HTML & CSS

BACKEND

PHP · Laravel · GraphQL · Symfony

DATA &
MESSAGING

MongoDB · MySQL · RabbitMQ

LEADERSHIP

Technical leadership · Technical debt management · Technical roadmap · Scrum

EARLIER

Pimcore · Drupal · Python & Django · Server configuration

EDUCATION

Computer Engineering — Universitat Pompeu Fabra, 2012–2017

Computer Engineering — Universitat Politècnica de Catalunya, 2010–2012

Final degree project · Music Technology Group · UPF

A music recommendation web app built for people living with Alzheimer's and for their families and carers, as support for music therapy sessions.

The interesting part was applying new tooling somewhere it rarely goes: healthcare.
